PSYCHOLOGICAL EVALUATION

AND TREATMENT:

Tax ID: 84-3490450

From: Simeon Igwesi, MA., LPC.

Re: Izonderera Dieudonne

DOB: 06/05/1996

Length of contact: From 10/13/2025 to 11/21/2025.

Client: Izonderera Dieudonne:

Client's Presenting Problems: Izonderera Dieudonne, 29 years old, presents with lack of self-control, inability to focus or concentrate, nightmares, worry, intrusive thoughts, sleeplessness, restlessness, tiredness, frustration, loss of appetite, sadness, fear of driving or riding.

Precipitating Factors (psychosocial stressors causing symptoms):

Client reported being in a motor vehicle accident on 09/26/2025, stating that the accident was a shock, causing pain, strain on the shoulder, upper back, lower back, stomach and legs. Client reported serious pain and anxiety.

Client reported being confused and traumatized. Client conveyed fear of insecurity, flashbacks about the accident, uncomfortable feelings, avoidance of the accident location, increased fear and danger, and uneasiness.

Diagnosis: DSM-IV/ICD-9-CM: Multiaxial Evaluation:

Axis I: 300.02 Generalized Anxiety Disorder:

ICD-9-CM ICD-10-CM

300.02 F41.1 Generalized Anxiety Disorder

Includes: F43.23 Adjustment disorder with mixed Anxiety and Depressed Mood.

Short-Term Objectives:

Therapist described to the client, situations, thoughts, feelings, and actions associated with anxieties and worries, and their impact on functioning. Therapist completed psychological evaluation of the client, designed to assess worry and anxiety issues. Therapist verbalized to client, an understanding of the

HEALTHCARE COUNSELING CENTER

cognitive, physiological, and behavioral components of generalized anxiety disorder and ways to control them effectively.

Therapeutic Interventions:

The goal and focus of the therapeutic interventions were for the therapist to develop a level of trust with the client; providing support and empathy to encourage the client to feel safe in expressing Generalized Anxiety Disorder symptoms. Client described past experiences of anxiety and their impact on functioning. Therapist assessed the focus, excessiveness, and uncontrollability of the worry and duration of anxiety symptoms. Therapist facilitated to client, how generalized anxiety disorder usually involved excessive worry about unrealistic threats, tensions, hypervigilance, and avoidance of places, events, that tend to remind client about the incident.

Therapist discussed how treatment targeted, anxiety symptoms, worries, and avoidance, in order to help client, manage worries effectively, reducing over arousal, and eliminating unnecessary avoidance of places. Therapist gave client some assignments, to read psychoeducational sections of books or treatment manuals, on worries and generalized anxiety issues.

Treatment Modalities:

Cognitive Behavioral Psychotherapy strategies were utilized to replace negative thought processes with positive thought processes, and thereby gradually and systematically diminish the level of anxiety.

Different treatment modalities such as Eye Movement Desensitization and Reprocessing (EMDR) techniques, were utilized to reduce emotional reaction to the trauma. Relaxation and positive imagery, as aids to sleep, were utilized to assist client in developing an awareness of cognitive messages to decrease hopelessness and restlessness. Therapist helped client reinforce positive, reality-based cognitive self-confidence and increase adaptive actions. Client had willingness for treatment and very cooperative with interventions.

Clinical findings: Mental Status evaluation:

Appearance	X Well-groomed
Attitude	X Guarded
Behavior	X Not Normal
Mood	X Irritable/Angry
Affect	X Flat
Mood & Affect	X Congruent

HEALTHCARE COUNSELING CENTER

Client was very fearful, lacks trust and reacts negatively when exposed to internal and external cues that symbolize the traumatic events that led to anxiety. Client was very sad, irritable and depressed, lacks concentration and was unable to act appropriately.

HEALTHCARE COUNSELING CENTER		
TREATMENT		
From: Simeon Igwesi, MA., LPC		
Client Name: Izonderera Dieudonne		DOB: 06/05/1996
Treatment Timeframe: 10/13/2025 From:		To: 11/21/2025
Problem#1	<u>GENERALIZED ANXIETY Disorder:</u> Therapist supported the client to maintain involvement in work, family, and social activities rather than escaping or avoiding them to focus on anxiety issues. Client recognized, shared & accepted feelings.	
Problem#2	<u>Adjustment Disorder with Mixed Anxiety and Depressed Mood:</u> Therapist taught client to implement sleep hygiene practices to help the client reestablish a consistent sleep-wake cycle; Therapist reviewed, reinforced success, and provided corrective feedback toward improvement. Client participated in relaxation training exercises three times/week.	

HEALTHCARE COUNSELING CENTER

Summary of Client's Observable Symptoms and Clinical Responses:

Client showed marked improvement in positive thinking and positive attitude; reduced fear and ability to concentrate and focus on activities of daily living.

Progress Update:

Client attended all therapeutic sessions and modalities, and actively addressed treatment issues. Overall participation level was active and appropriate.

Method of Intervention: Cognitive Behavioral Therapy Techniques; Positive Thinking Techniques; Anxiety management Strategies.

Discharge Plan: Izonderera Dieudonne was discharged upon attainment of therapeutic goals; client displayed ability to manage anxiety symptoms, and stabilization of socioemotional functioning. Client was encouraged to practice the psychotherapeutic techniques taught during the sessions to avoid relapse.

NB: It is important to note that reoccurrence of Generalized Anxiety Disorder symptoms may be possible in the future life of the client.

Client: Izonderera Dieudonne

Progress notes:

DOB: 06-05-1996

DOI: 09-26-2025

10/13/25. Initial assessment of client's problems was conducted. It appeared that client developed Generalized Anxiety Disorder as a result of the traumatic accident.

10/15/25. An analysis of client's support system was conducted by use of psychosocial assessment to evaluate personal psychological and environmental needs of the client. This shows the areas of intervention to help client manage anxiety issues as a result of the traumatic accident.

10/17/25. Psychotherapy—Client was educated on cognitive behavioral therapy psychotherapy strategies; to replace negative thought processes with positive thought processes, to diminish the effect of anxiety. This helps client in overcoming anxiety issues resulting from the accident.

10/20/25. Psychotherapy— Client was taught relaxation techniques to enhance concentration and calming. This technique helps client diminish the effect of anxiety as a result of the accident

10/22/25. Psychotherapy—Client was educated on positive imaging to help reduce stress by creating a feeling of well-being and comfort. This assists client in letting go false negative images impacted on client when the accident occurred.

10/24/25. Psychotherapy—Client was educated on ways to improve self-confidence. This technique helps client restore self-confidence in driving or riding which the accident had negatively affected.

10/27/25. Psychotherapy—Client was educated on eye movement desensitization and reprocessing (EMDR) techniques; as a way of reducing emotional reactivity to trauma. This helps client heal from the symptoms of emotional distress as a result of disturbing experience from the accident.

10/29/25. Psychotherapy —Client was educated on ways to improve positivity in activities of daily living. This enables client restore positivity in activities of daily living instead of living with the fear that the accident had impacted.

10/31/25. Psychotherapy—Therapist educated client on ways to manage worries effectively to stay in control, due to the accident had caused client to worry about many things that client had not been worried about before the accident.

11/05/25. Psychotherapy—Client was educated on ways to manage and control insomnia to help improve cognitive strength. The accident had caused client sleepless nights with thoughts and nightmares, being constantly reminded about the traumatic accident.
